

## DOSUN-FUWARI

There are irregular regions (indicated by thick black lines) and black cells in the puzzle grid. The goal is to place one black circle and one white circle in each region.

White circles ("balloons") are light and float, so they must be placed either in the topmost cells of the grid or in a cell right under a black cell or under other white circles.

Black circles ("iron balls") are heavy and sink, so they must be placed either in the bottom-most cells of the grid or in a cell right over a black cell or over other black circles.
