

## DOUBLE CHOCO

Exactly half of the cells in the grid are painted gray. Divide the grid into regions such that each region contains one area of white cells and one area of gray cells. This pair of areas must be of the same shape and size (the areas may be rotated or mirrored).

A number indicates how many cells of the same color are in the region. A region may contain more than one cell with a number (in this case the cells contain the same number).

2				2			2
		4					
			4			3	
		3		3		3	
1			3				1
		3		1			
				2			2
	3		3			2
