

HEKI

The goal is to divide the entire grid into regions of six cells.

Each region contains exactly two given numbers.

A number clue indicates how many cells of the same region are orthogonally adjacent to the cell with this number.

		1			2	
2	2			1		
				2		
		2		2	2	
	1		2		3	
			2		3
