TERRA X

The puzzle grid is divided into regions. Place a digit from 0 to 9 in each region such that regions with equal numbers do not share an edge (they may touch each other diagonally).

For each grid point where four regions meet (indicated by black dots), the sum of the digits in those regions must equal 10.

5	4			3					3
									2
			0		4				4
						0			
		2						0	
	0			1					5
		2				8			
	0			5					
		6			1				1
			4			2
