

# LINESWEEPER

The task is to create a single continuous non-intersecting loop that connects the centers of the grid cells.

The numbered cells cannot be passed through; the number in the cell indicates how many of the eight surrounding cells should contain some part of the solution path.

For example, a "0" clue means that the 8 surrounding cells can't be passed through by the loop at all.

			5			5			
3									
			5	6			5		
4								6	
				7					
						6			4
			7						
					5		7		
3		7			4				
									3
