

HEKI

The goal is to divide the entire grid into regions of six cells.

Each region contains exactly two given numbers.

A number clue indicates how many cells of the same region are orthogonally adjacent to the cell with this number.

1			2		2	
	2		2			
		1				1
2		1				2
2			3		1	
		2
