HEKI

The goal is to divide the entire grid into regions of six cells.

Each region contains exactly two given numbers.

A number clue indicates how many cells of the same region are orthogonally adjacent to the cell with this number.

		3			2		
		2					2
	2	1	2				
2			1		3	3	
			2	2			
		1		2			2
