

LINESWEEPER

The task is to create a single continuous non-intersecting loop that connects the centers of the grid cells.

The numbered cells cannot be passed through; the number in the cell indicates how many of the eight surrounding cells should contain some part of the solution path.

For example, a "0" clue means that the 8 surrounding cells can't be passed through by the loop at all.

		8		7					
5							6		2
									2
				6					
	6				6				
5				5					5
		6					8
