

## COCKTAIL LAMP

Shade some cells black such that all black cells in a bold-outlined region are connected orthogonally (forming a "block"). A cell with a number indicates how many cells in the region must be shaded black; in a region without a number, any amount of cells may be shaded (all cells can also be unshaded).

When two cells are orthogonally adjacent across a region boundary, at least one cell must be unshaded. All blocks of black cells must be connected to each other through their corners.

No 2x2 cell area within the grid can contain all black cells.
