

HUKUWALL (CODED FOUR WINDS)

The puzzle grid contains letters in some cells. Each letter is coded for a number: all the same letters must be replaced by the same number, and different letters must be replaced by different numbers.

The goal is to draw a horizontal or vertical line in every empty cell. A number in a cell indicates the total length of the lines that originate from this cell. A line cannot connect two cells with letters. The lengths of the lines coming out of the same letters must be all different.
