

PATA

Shade some cells black such that all the black cells form one contiguous region and there is no 2×2 cell area in the grid that is all black.

The numbered cells cannot be black. These number clues indicate the length of each consecutive white cell block in the eight surrounding cells.

If there is more than one digit in a numbered cell, the groups of white cells have to be separated by at least one black cell.

			1 1	1 2		1 1		1	
5									
1 3									3
1 2					1 1 1			7	
									1 2
			1		1 1				
			1 3				3		
	1 3								4
		7							
					1 2
