# HEKI

The goal is to divide the entire grid into regions of six cells.

Each region contains exactly two given numbers.

A number clue indicates how many cells of the same region are orthogonally adjacent to the cell with this number.

| 2 |   | 2 |   | 2 | 2 |
|---|---|---|---|---|---|
|   |   |   | 2 |   |   |
| 1 |   |   |   | 2 |   |
|   |   |   |   | 2 |   |
| 2 |   |   | 3 |   |   |
