

## SQUARE JAM

Divide the grid into square regions. A cell with a number indicates the side length of the region to which it belongs.

A region may contain any amount of numbered cells and there may be regions without a number.

No grid dot should be shared by the corners of four regions.

			2	2				2	
		3							
3			2						
						2			
		3			3			2	
3			2			3			2
		2		1
