

## SASHIKAKU

The puzzle grid contains numbers in some cells.

The aim is to divide the grid into rectangular and square regions such that each region contains exactly one given number.

A given number represents the difference between the width and height of the region to which it belongs.

	0					0	2
		4	4				
	2						
							2
	0						
1	0			0		0
