

# LINESWEEPER

The task is to create a single continuous non-intersecting loop that connects the centers of the grid cells.

The numbered cells cannot be passed through; the number in the cell indicates how many of the eight surrounding cells should contain some part of the solution path.

For example, a "0" clue means that the 8 surrounding cells can't be passed through by the loop at all.

3							5		
					8				
	6							8	
						6			
				7					
		4							5
	7				6			6	
			7						
					5
