

LETTER SLIDE

Slide the letter tiles from the edges of the grid into the blank squares to reconstruct the crossword. The letter tiles can only be moved horizontally or vertically.

Each blank square can be occupied by only one tile. If there are no tiles available to move into a blank square, then at least one tile must be in the wrong place.

Unlike a crossword, there are no clues in this puzzle. Use logical deduction to choose between the available letters for each square to form valid words.
