

SASHIKAKU

The puzzle grid contains numbers in some cells.

The aim is to divide the grid into rectangular and square regions such that each region contains exactly one given number.

A given number represents the difference between the width and height of the region to which it belongs.

				4	4				
									3
								2	
2			4						
2					5	0	0		4
						1		3	
			1
