

HEKI

The goal is to divide the entire grid into regions of six cells.

Each region contains exactly two given numbers.

A number clue indicates how many cells of the same region are orthogonally adjacent to the cell with this number.

	1		2			
	2				2	1
			1	2		
	3		1		1	
2						
1			2	2
